LAWN CARE INSTRUCTIONS:

SODDED LAWNS:

- Your new sod must be thoroughly soaked for at least one week. It takes large amounts of water to soak through the sod and into the soil.
- Be extremely cautious along the edges of the lawn since they tend to dry out easily.
- In general, each lawn area will need a thorough soaking every other day. However, if extremely hot, it will require water every day.
- Avoid walking on your lawn as much as possible during the early stages. If it is soaked, it may result in damage.
- Reduce your watering schedule to twice a week after 2 weeks. Be careful not to let it dry out during hot periods.
- Never cut your sod shorter than 2 inches. A mowing height of **2.5 inches** is usually recommended.
- New lawns with topsoil should be mowed with a **push mower**, rather than a rider, until the topsoil has firmed up.
- Always water your sod after mowing so that it does not dry out.
- After 30 days, fertilizer **must** be applied. Use The Andersons 22-0-3, available from our Retail Center.
- After 60 days, apply The Andersons 22-0-3 again, available from our Retail Center.
- After 90 days, follow the schedule as illustrated below according to the appropriate time of year.

SEEDED LAWNS:

- Water your seeded lawn frequently. The surface of the soil must be kept wet at all times until the grass is 2 inches high.
- Your lawn will germinate in about 20-29 days. If it appears thin at first, don't be alarmed.
- Each grass plant will spread out to make the lawn much thicker.
- Never mow your lawn shorter than 2.5 inches.
- New lawns with topsoil should be mowed with a **push mower**, rather than a rider, until the topsoil has firmed up.
- During warm periods, be sure to water your lawn after mowing so that it does not dry out. Do not remove the straw mulch.
- However, if the straw on your lawn gathers in one area, thin it out so it does not smother the seedlings.
- After 30 days, fertilizer **must** be applied. Use The Andersons 22-0-3, available from our Retail Center.
- After 60 days, fertilizer **must** be applied. Use The Andersons 22-0-3, available from our Retail Center.
- After 90 days, follow the schedule as illustrated below according to the appropriate time of year.
